Vera AI

Vera AI is a Greece-based technology company. It deploys Vera, its proprietary, AI-augmented learning engine, to represent businesses around the clock.

Core product

Vera engine: Hands-off. Actionable. Autonomous. Always-on.

Vera is a fully hands-off, AI-augmented agent.

Bespoke apps

These are purpose-built progressive web applications shaped around a Client's specific operational needs.

- **One tap.** They install on any device without an app store.
- **Native-quality experience.** They feel like a native app, with no store approval or download barrier.

Services

1. **Vera AI engine deployment.** Integration of the proprietary Vera engine into a Client's business, configured to the Client's specific needs, with industry-specific knowledge, modules and workflows.
2. **Bespoke progressive web applications.** Purpose-built applications shaped around a Client's specific operational needs. Built as one-tap applications, they install on any device without an app store and deliver a native-quality experience.
3. **Website design and delivery.** End-to-end development, from concept to launch, specified to the Client's needs: e-commerce platforms, websites that support in-store and offline sales, or corporate sites.

Vera: Your business's digital representative

Vera is being developed into a full AI agent that represents a business from end to end. She is the Client's face, public relations voice and 24/7 representative: the single point of contact for customers, partners and suppliers.

- **The face of the business.** A consistent, branded presence that greets, advises and serves customers by voice and chat, in their own language, at any hour.
- **Acts on the Client's behalf.** Vera is designed to buy, sell and negotiate within limits the Client sets, completing transactions without waiting for staff.
- **Agent-to-agent commerce.** As businesses and consumers adopt their own AI agents, Vera is designed to deal with them directly, agreeing terms and closing orders machine to machine.
- **Public relations, around the clock.** She answers enquiries, protects the brand's tone and keeps every interaction on message.
- **Always learning.** Insights from real interactions are refined into each release, making every Client's Vera more capable over time.

The engine follows a modular architecture: a common core, extended by industry modules that encode sector-specific expertise. Each deployment is specified to the individual Client's products, processes and goals.

Why Vera AI

- **One tap away.** Your first and only point of contact needed for your customers. Vera is all your customers need to reach your business: one tap, one contact for every question, order and request.
- **A single, integrated partner.** The Client's website, application and AI assistant are designed together as one coherent solution.
- **Configured to the Client's brand.** Each Client operates an independent deployment with its own assistant identity, tone, catalogue, branding and services.
- **Built for the agent economy.** The platform grows with the Client as AI agents become a normal part of how businesses buy and sell.
- **Scalable by design.** Clients begin with the capability needed today and extend it with further modules as the business grows.
- **Local expertise, multilingual delivery.** Based in Greece, Vera AI supports Greek and English from launch, and can fully implement Arabic in its regional varieties.

Next steps

To develop and promote further expansion and business opportunities, Vera AI is fully collaborating with Omega Gate Training Center P.C. (Mr Ermis Kounio, Executive Director) as its first point of contact in Egypt.

Vera AI welcomes the opportunity to understand a prospective Client's specific needs and business objectives, and to demonstrate Vera on a product range similar to theirs.
